JoEllen Weaver
Penn Medicine BioBank Technical Director

Your participation in research can impact the future of medicine.
You are invited to help Penn Medicine change the future of healthcare.

As one of the world’s leading research institutions, Penn Medicine is dedicated to making new discoveries in science. We promote a strong connection between cutting-edge research and excellent patient care. Our work as researchers is inspired by the lives and stories of real patients. Often these partnerships with our patients lead to groundbreaking discoveries in medicine that can improve patients’ lives. To that end, we invite you to partner with us and help impact the healthcare of future generations by participating in the Penn Medicine BioBank.

The BioBank is a collection of biological samples, such as blood or tissue, that are donated by volunteers like you. These samples are then used by researchers to discover new ways to detect, treat, and maybe even prevent or cure disease.

Future generations will benefit from your donation.

How to Participate

Participation is completely voluntary and involves just a few steps:

• Sign a consent form.
• Allow our team access to your blood from a clinical appointment.
• Allow our team to access your medical record.
• You may also be asked to complete a brief survey.

As our partner in research, we will provide updates on studies underway. We may also contact you to review any changes about your health or to participate in additional studies in the future.
